

WaterWise Insights

At WaterWise, we believe in providing a comprehensive water conservation program that goes beyond selling products. Our mission is to help hotels and multifamily properties save both water and money while ensuring sustainable practices. Our approach combines innovative technology, continuous water usage monitoring, dedicated support, including technicians who can diagnose and address any repairs, making us your partner in water conservation.

HOW DOES IT WORK?

Initial Water Usage Analysis

- We begin by analyzing your property's current water usage patterns. This detailed assessment helps us identify key areas for improvement and predict potential savings.

Predictive Savings Estimates

- Before installation, we provide predictions on how much we anticipate your water usage will decrease. This sets clear expectations for your savings.

Installation of Water Conservation Products

Our program includes the installation of advanced water conservation products:

- **Toilet Sensors:** Allow the toilet tank to fill only when occupancy is detected, minimizing running toilets and water waste.
- **AI-Controlled Shower Heads:** Automatically reduce flow to 10% when water reaches 101°F, returning to full flow when the user steps in. The shower will shut off after 8 minutes of no motion, preventing waste.
- **Low Flow Sink Aerators:** Reduce water flow while maintaining performance.
- **Low Flow Shower Heads:** Conserve water during showers without compromising comfort.

Baseline Water Usage Establishment

- After installation, we establish a baseline for water usage to accurately measure the impact of our conservation efforts. This enables us to effectively monitor for any spikes in usage, allowing us to support your maintenance team or dispatch our technicians to identify the cause of the spike and make the necessary repairs.

INSTALLATION PROCESS

Thorough Property Inspection

During the installation process, we conduct a comprehensive inspection to identify any existing leaks that may be causing damage or wasting water.

Installation of Products and Repairs

In addition to installing our water conservation products, we will present you with a full report of any leaks or issues found. With your approval, we can make necessary repairs, which may include:

- Replacing toilet flappers
- Fixing leaking faucets
- Replacing shower valve cartridges
- Replacing angle stops, flush valve kits, toilet seats, and wax rings

ONGOING MONITORING + SUPPORT

Water Usage Monitoring

Our WaterWise analytics team utilizes advanced software to continuously monitor your water usage.

- **Remote Monitoring:** Provides access to our dashboard for real-time, minute-by-minute water usage data, enhancing our ability to detect leaks and unusual spikes.

Proactive Maintenance Support

If we detect any spikes in usage that deviate from normal activity, we will collaborate with your maintenance team remotely. If necessary, we can deploy our technicians to diagnose and resolve water issues promptly.

Pricing Structure

Our monitoring service is available for a low monthly fee. Our meters provide superior minute-by-minute data, enabling us to offer better insights and quicker responses.

Your Water Conservation Partner

WaterWise is committed to creating a sustainable future through effective water conservation. Our program not only helps you save water and money but also provides ongoing support to maintain those savings. By choosing WaterWise, you're investing in a partnership that prioritizes efficiency and sustainability.
